R12j: what an action + Ward identity fixes - and what it does not
Causal order +
number-volume
Action ensemble
S[g, microstate]
Ward identity
(divergence constraint)
First cumulant
< S > -> EH + boundary
Second cumulant
noise / response kernels
Transverse sectors
spin-2 and spin-0
BDG mean has a
continuum GR limit
Fluctuations need microdynamics;
smearing introduces a mesoscale
